“Public Announcement”

Launch of the Digital License Profile Project

(21st Feb, 2021)

Council noted with concern that the pre-existing data base of licensed practitioners only had CNIC's of less than 35% licensed practitioners in their record. Council approves the launch in March 2021 of the Digital License Profile project allowing practitioners to create their digital profile online and on biometric verification update their status and profile online with automated verification processes. The Digital License Profile will enable the Commission to issue licenses to practitioners immediately and in a digital format. It will also secure a practitioners data and identity as well as enable a public mobile app for any person to verify the status of a medical practitioner.
